4. Is <animal> in heat or pregnant? **Yes or No**
5. Does <animal> have a history of seizures? **Yes or No**

PRE-ANESTHETIC SAFETY SCREENING

Your pet is being admitted to our hospital for surgery / anesthesia today. A pre-surgical physical examination will be performed before administering anesthesia. Fortunately, advances in anesthesia have made routine procedures relatively safe, with low rates of complications. However, occasional problems can occur due to preexisting conditions not made evident during routine histories and physical examinations. To minimize problems, we recommend that your pet be screened prior to surgery by means of the diagnostic tests indicated below. These tests are the same as those performed on people before any surgical procedure.

Please Initial

Pre-Anesthetic Blood & Safety Profile \$64.00 _____ *Accept* _____ *Decline*

Includes complete blood count, and checks liver & kidney function. This is required for patients over the age of 7.

Pre-Surgical Coagulation Test \$22.00 _____ *Accept* _____ *Decline*

Helps to identify conditions that may result in excessive bleeding (this test is mandatory for Dobermans)

EKG \$20.00 _____ *Accept* _____ *Decline*

Electrocardiograph screen for heart health

Heartworm Testing (dogs) \$30.00 _____ *Accept* _____ *Decline*

We highly recommend any pet not currently on heartworm prevention be tested prior to surgery. There is an increased risk for possible life threatening complications during surgery if your pet is heartworm positive.

Feline Leukemia/Feline Aids Test (cats) \$39.00 _____ *Accept* _____ *Decline*
